Jaguar recently completed patient enrollment in its ongoing pivotal, Phase 3 [OnTarget](#) clinical trial of crofelemer for prophylaxis of diarrhea in adult cancer patients receiving targeted therapy with or without chemotherapy

SAN FRANCISCO, CA / ACCESSWIRE / June 14, 2023 / Jaguar Health, Inc. (NASDAQ:JAGX) today announced that Ladenburg Thalmann is hosting a live virtual "Duologue Series" discussion at 1:00 p.m. EDT on June 22, 2023 with Lisa Conte, Jaguar's founder, president and CEO. This virtual event, open to the financial and business community, will address the impact that cancer therapy-related diarrhea (CTD) has on patients and the importance of patient advocacy in supportive care.

"Diarrhea is a highly neglected and unmet burden of cancer therapy-related diarrhea. Supportive care is cancer care, and our company takes great pride in incorporating the patient voice in developing solutions to address the comfort and dignity of the patient as they manage their cancer treatment journey and their ability to adhere to their targeted cancer therapy," Conte said. "Two leading cancer patient advocates will join us for the virtual discussion on June 22nd, one of whom is a former clinician, and there will be a Q&A period during the event."

Jaguar recently completed patient enrollment in its ongoing pivotal, Phase 3 [OnTarget](#) clinical trial of crofelemer for prophylaxis of diarrhea in adult cancer patients receiving targeted therapy with or without chemotherapy, and the primary endpoint based on patient reported outcomes is expected in October 2023. The OnTarget trial is evaluating the effectiveness of crofelemer's novel mechanism of action - the modulation of two gastrointestinal chloride ion channels - to mitigate or substantially reduce chronic cancer therapy-related diarrhea. Jaguar's expectation is that the global OnTarget trial will provide evidence that diarrhea associated with targeted cancer therapies is chronic, not acute, and impacts the patient's ability to perform activities of daily living as well as remain on their cancer therapy regimens at proven doses for better outcomes.

About Cancer Therapy-related Diarrhea

A significant proportion of patients undergoing cancer therapy experience diarrhea, and diarrhea has the potential to cause dehydration, potential infections, and non-adherence to treatment in this population. Novel "targeted cancer therapy" agents, such as epidermal growth factor receptor (EGFR) antibodies and tyrosine kinase inhibitors (TKIs), with or without cycle chemotherapy agents, may cause increased electrolyte and fluid content in the gut lumen, which results in passage of loose/watery stools (i.e., diarrhea). Diarrhea has been reported as one of the most common side effects of TKIs and may result in cancer therapy drug holidays or reductions from therapeutic dose, potentially impacting patient outcome. Diarrhea is also a common side effect of some approved CDK 4/6 inhibitors. Patients with CTD are 40% more likely to discontinue their chemotherapy or targeted therapy than patients without CTD,¹ and the cost of care of CTD patients is estimated to be 2.9 times higher than for patients who are not experiencing CTD.²

Participation Instructions for Virtual Discussion Event

Event is exclusively for investors, financial analysts, business media, and business development executives.

When: Thursday, June 22, 2023 at 1:00 p.m. Eastern Daylight Time

About Jaguar Health, Napo Pharmaceuticals, Napo Therapeutics, & Jaguar Animal Health,

Jaguar Health, Inc. is a commercial stage pharmaceuticals company focused on developing novel, plant-based, sustainably derived prescription medicines for people and animals with GI distress, including chronic, debilitating diarrhea. Our crofelemer drug product candidate is the subject of the [OnTarget](#) study, an ongoing pivotal Phase 3 clinical trial for prophylaxis of diarrhea in adult cancer patients receiving targeted therapy. Jaguar Health is the majority shareholder of Napo Therapeutics S.p.A. (f/k/a Napo EU S.p.A.), an Italian corporation established by Jaguar Health in Milan, Italy in 2021 that focuses on the development of rare disease indications of crofelemer and expanding crofelemer access in Europe. Jaguar Animal Health is a tradename of Jaguar Health.

Forward-Looking Statements

Certain statements in this press release constitute "forward-looking statements." These include statements related to the expectation that Ladenburg Thalmann will host a virtual discussion event June 22, 2023, the expectation that two leading cancer patient advocates will join the virtual discussion, the expectation that the primary endpoint of the OnTarget trial will be available in October 2023, and the expectation that the OnTarget trial will provide evidence that diarrhea associated with targeted cancer therapies is chronic, not acute, and impacts the patient's ability to perform activities of daily living as well as remain on their cancer therapy regimens at proven doses for better outcomes. In some cases, you can identify forward-looking statements by terms such as "may," "will," "should," "expect," "plan," "aim," "anticipate," "could," "intend," "target," "project," "contemplate," "believe," "estimate," "predict," "potential" or "continue" or the negative of these terms or other similar expressions. The forward-looking statements in this release are only predictions. Jaguar has based these forward-looking statements largely on its current expectations and projections about future events. These forward-looking statements speak only as of the date of this release and are subject to several risks, uncertainties and assumptions, some of which cannot be predicted or quantified and some of which are beyond Jaguar's control. Except as required by applicable law, Jaguar does not plan to publicly update or revise any forward-looking statements contained herein, whether as a result of any new information, future events, changed circumstances or otherwise.
