Item 8.01 Other Events.

As previously reported in a Form 8-K filed on November 14, 2018, the Company received a letter from the Listing Qualifications Staff (the “Staff”) of The Nasdaq Stock Market notifying the Company that the bid price for the Company’s common stock for the last 30 consecutive business days had closed below the minimum \$1.00 per share required for continued listing under Nasdaq Listing Rule 5550(a)(2). As previously reported in a Form 8-K filed on May 17, 2019, the Company did not regain compliance and received a letter from Nasdaq stating that the Company’s securities were subject to delisting from Nasdaq unless the Company timely requested a hearing before the Nasdaq Hearings Panel (the “Panel”). The Company timely requested a hearing before the Panel, which stayed the delisting pending the Panel’s decision.

On June 21, 2019, the Company received a letter from the Nasdaq Office of General Counsel notifying the Company that the minimum bid price deficiency had been cured and that the Company was in compliance with all applicable listing standards. Accordingly, the hearing was considered moot and cancelled, and Nasdaq has determined to continue the listing of the Company’s securities on The Nasdaq Stock Market.

On June 24, 2019, the Company issued a press release with respect to the foregoing, a copy of which is furnished as Exhibit 99.1 hereto.

About Jaguar Health, Inc.

Jaguar Health, Inc. is a commercial stage pharmaceuticals company focused on developing novel, sustainably derived gastrointestinal products on a global basis. Our wholly-owned subsidiary, Napo Pharmaceuticals, Inc., focuses on developing and commercializing proprietary human gastrointestinal pharmaceuticals for the global marketplace from plants used traditionally in rainforest areas. About Mytesi®

Mytesi (crofelemer) is an antidiarrheal indicated for the symptomatic relief of noninfectious diarrhea in adult patients with HIV/AIDS on antiretroviral therapy (ART). Mytesi is not indicated for the treatment of infectious diarrhea. Rule out infectious etiologies of diarrhea before starting Mytesi. If infectious etiologies are not considered, there is a risk that patients with infectious etiologies will not receive the appropriate therapy and their disease may worsen. In clinical studies, the most common adverse reactions occurring at a rate greater than placebo were upper respiratory tract infection (5.7%), bronchitis (3.9%), cough (3.5%), flatulence (3.1%), and increased bilirubin (3.1%).

See full Prescribing Information at Mytesi.com. Crofelemer, the active ingredient in Mytesi, is a botanical (plant-based) drug extracted and purified from the red bark sap of the medicinal *Croton lechleri* tree in the Amazon rainforest. Napo has established a sustainable harvesting program for crofelemer to ensure a high degree of quality and ecological integrity.
